Pressure Converter UNICON-P

- Programming via front side keypad
- For dry and non aggressive gases
- Measuring range programmable
- Output 4..20 mA, 2-wire connection

Characteristics

Pressure converters UNICON-P can be used for measuring low pressure, differential pressure in filter- and clean room technologies. In connection with orifice plates, impact (dynamic) pressure, venturi nozzle it is suitable for measurement of flow rates of dry and non aggressive gases. The model for wet media (condensate-stability device; measuring ranges 30-60) is designed only for relative pressure.

Within the device dependent full scale range, output and display may be adjusted. The device offers additional features like a unidirectional (e.g. 0..1 mbar) or bidirectional (e.g. -1..1 mbar) pressure range. The analog output depends to the programmed analog output.
