## Characteristics

Devices of the MU125 series convert a temperature measurement value or resistance measurement value from various sensors to a current signal of 4..20mA. The universal configurability of the measuring inputs reduces the stock requirement for various applications. The housing width of only 12.5 mm enables space-saving installation in the switch cabinet.

\*) Measurement deviation depending on the environmental temperature in the switch cabinet (-10..+60°C)

\*\*) Adjusting zero point and limit value via the integrated trim potentiometers makes it possible to also connect KTY sensors for these measuring ranges. The linearisation must then be accomplished with the help of a parallel resistor.

**A service mode for the trim potentiometers on the front offers the following possibilities:**

- 1) A check of whether potentiometers are positioned at the calibrated factory settings
- 2) The pre-adjustment of a new output characteristic curve only with connection of a current measuring device. (a temperature calibrator is not necessary)
- 3) Specification of a constant value at the current output, e.g. in order to test the reaction of connected devices. (Limited range from 5.6..20mA)
