Characteristics

The GIA 20 EB is a microprocessor-controlled displaying, monitoring and controlling device for universal use.

It has a universal input for standard signals (0..20 mA, 4..20 mA, 0..50 mV, 0..1 V, 0..2 V and 0..10 V), resistance thermometers (Pt100 and Pt1000), thermocouples (type J, K, N, S and T) and frequency (TTL and switch contact). Additionally it provides functions like rotation speed measurement or counter.

The GIA 20 EB is equipped with switching outputs. The output functions can be configured as 2-point controller, min/max alarm, 3-point controller, 2-point controller with min/max alarm, etc. The relay state is indicated by 2 additional LEDs below the 7-segment display.

The device identifies impermissible operating states like display or system errors and displays a corresponding error code.

Special design types (upon request)

| | |
|-----|---|
| SA1 | Tare and hold function (only for 4..20 mA input) If the external switch gets closed the display is set to 0 (tare function). As long as the switch stays closed the display is updated. Once the switch is opened the display is frozen (hold function). |
| SA2 | Max value display (only for 4..20 mA input) The currently measured value is displayed if the external switch is closed. The highest measured value is displayed if the external switch is opened. |
| SA3 | Frequency input for 10..100 mV The device provides a frequency input with connection possibility for: frequency (10..100 mV signals) |
| SA4 | Measuring input 0..30V The original measuring input 0..10 V is changed to a measuring input for 0..30 V signals. All adjustments for this input have to be done at the menu point 0..10 V. |
| SA5 | Delayed measured value displaying This special design type can be used to suppress short-term perturbations of signal normally changing very slowly. This special design type influences only standard signal measurements. |
